EXECUTIVE PROFILE

CTO & Technical Executive with more than 30 years of experience in complex cross-disciplinary systems - connected industrial robotics, critical embedded electronics, software, IoT, cloud, data and artificial intelligence. Architect of high-tech solutions combining hardware, firmware, software and data to turn complex products into robust, industrializable and value-creating offerings.

POSITIONING

Technical executive at the intersection of strategy, architecture and execution, able to connect product vision, technology trade-offs, industrialization and business value creation. My positioning goes beyond engineering expertise alone: I structure, align and bring disciplines together around a clear and actionable roadmap.

WHAT I BRING

A 360-degree view of the product, from critical components to connected services; the ability to build strong multidisciplinary teams; clarify architecture choices; secure development trajectories; and turn complex technology into an offering that is understandable, credible and attractive for customers, partners and investors.

KEY SKILLS

Architecture & Technology

- Connected IoT systems architecture
- Cross-disciplinary industrial robotics
- Embedded electronics (FPGA, SoC, CPU)
- Real-time software, C/C++, Python
- Full-stack cloud & microservices
- Data engineering & AI/ML models
- DO-254, DO-178, ARP-4754

Management & Leadership

- Structuring multidisciplinary teams
- Technology roadmap & decision-making
- R&D-to-industrialization transition
- Technical governance & prioritization
- Agile methods / V-cycle
- Partner management & IP strategy

Innovation & Transformation

- Technology strategy definition
- Turning data into service models
- IoT & connectivity (MQTT, REST, 4G/5G)
- Applied AI, vision & automation
- SIMULINK, Docker, CI/CD
- B2B product value creation

PROFESSIONAL EXPERIENCE

Chief Technology Officer (CTO) • Euveka | 2018 - Present

Strategic and operational leadership of the engineering center for a high-tech connected robot integrating mechatronics, electronics, embedded software, IoT, cloud and data.

- Cross-disciplinary system architecture: design and leadership of the overall hardware / firmware / software / cloud architecture of a complex robotic IoT product
- Product, data & services: deployment of data collection pipelines, analytics building blocks and digital extensions oriented toward customer services
- Technical leadership: management and structuring of multidisciplinary teams (mechatronics, electronics, embedded, full stack, data)
- Roadmap & strategy: definition of the technology roadmap, architecture trade-offs, intellectual property and industrial partnerships
- Transformation & industrialization: leading the transition from R&D to production, process optimization, and development of web, cloud, IoT and AI POC/MVPs

Product Manager • Safran Electronics | 2008 - 2018

Led the development of embedded electronic systems for aeronautical actuators, managing hardware and software teams on R&T projects in a critical environment.

- Design of embedded electronic architectures for electric actuators (FPGA, CPU, SoC)
- Real-time embedded software development and model-based auto-coding with SIMULINK, compliant with DO-254 and DO-178
- Integration of advanced AI / control functions into embedded systems and control loops
- Cross-team hardware / software coordination, customer interface and architecture trade-offs on critical programs

Head of Electronics & Validation Department • SKF | 2000 - 2008

Managed the electronics and validation department for aeronautical actuation systems, defining methodologies and integrating critical standards.

- Management of the electronics and validation department, structuring teams and processes
- Definition of validation methodologies and integration of aeronautical standards (DO-254, DO-178, ARP-4754)
- Product-line responsibility and close collaboration with production / maintenance to ensure in-service performance and reliability

Product Line Manager - Electric Screwdriving • Georges Renault | Before 2000

Held product-line responsibility in the field of electric screwdriving tools, at the interface of product performance, industrial constraints and customer usage.

- Product responsibility for electric screwdriving solutions in an industrial environment centered on reliability, usability and performance
- Cross-functional coordination across mechanics, electronics and product evolution to meet operational requirements
- Development of an end-to-end product vision combining technical constraints, field usage and market expectations

Head of Electronics Development • Garos S.A. | Early Career

Built the initial foundation of my career through electronic development for instrumentation systems, close to components, constraints and real-world product behavior.

- Electronics development applied to instrumentation and field-constrained products
- Hands-on exposure to components, testing, product constraints and technical problem-solving
- Early development of a cross-functional engineering mindset grounded in real product execution

EDUCATION & CERTIFICATIONS

Engineering Degree - IRESTE, Nantes

Aeronautical Functional Safety Certification - ARP-4754

Certified training - DO-254 (critical hardware) & DO-178 (critical software)

ADDED VALUE

Technology Vision	Soft Skills & Management	Experience Domains
Ability to design complex system architectures, from the connected physical product to the cloud service model, integrating data, AI and IoT as levers for business value and differentiation.	Calm and structuring leadership, ability to connect different disciplines, set direction, make trade-offs under constraints, engage teams and sustain clear execution over time.	Critical aeronautics, actuation and mechatronics, connected robotics, embedded electronics, real-time software, IoT, cloud, data, applied AI and product-to-service transformation.
